

KTwo is one of the fastest growing healthcare IT companies providing end to end integrated smart solutions and products spanning across the medical fraternity. Through our unique customer centric approach, we focus on engineering smart healthcare solutions incorporating the best global standards and practices, to meeting the needs of healthcare ecosystem.

K-PHMS transmits values measured by the patients at home into the cloud-based server that provides instant information about their health condition to their designated physicians.

Patients and their authorized physicians have worldwide access to the data stored in the EHR.

With the help of the Referral Management program, impending complications can be recognized at an early stage and adequate responsive measures taken. K-PHMS provides personalized, intelligent, non-intrusive, real time health monitoring of vital parameters like Blood Pressure, SPO2, Body Temperature, Respiration Rate, Heart Rate and ECG.

Referral management program has the capability to provide health trends to the patients, inform the physicians, refer patients for expert consultation by physicians seamlessly by using the latest mobile technologies.

Architecting Smart Solutions

PHM provides the real-time, personalized health monitoring that aids patient to do a preliminary analysis of the health condition

PHM is capable of measuring the following Vital Parameters of the users, NIBP (Non-Invasive Blood Pressure), Body Temperature, SPO2, Respiration Rate, Heart Rate and ECG.

The captured results are stored in the memory of the PHM device with date and time stamp that is transmitted to the mobile device through Bluetooth. The GPRS mobile shall synchronize the data to the central database.

The centrally stored data is made available for a doctor through a WEB-enabled application to view the vital parameters, make the analysis & prescribe appropriately.

Features:

- Provides personalized, intelligent, non-intrusive, real time health monitoring.
- Vital signs - Temperature, Pulse, Heart Rate, Blood Pressure, SPO2 and ECG - measured automatically.
- Using Wireless Technologies, the health indicators are routed to a server
- System informs personal physician and medical experts on the health of patient.
- Health Trend Analysis to track personal health.

Vision

To enhance the quality of life by building world class products and solutions through innovative applications of technology

Mission

To be globally dominant product brand in the industry and segments of our choice by 2012

Be a dream destination for every innovator to unleash their creativity by fostering a world class environment

Be a predominantly Employee Owned Organization
