

## End to End Unified Healthcare Management System

KTwo is one of the fastest growing healthcare IT companies providing end to end integrated smart solutions & products spanning across the medical fraternity. Through our unique customer centric approach, we focus on engineering smart healthcare solutions incorporating the best global standards & practices, to meet the needs of healthcare ecosystem.

Our suite of healthcare product offerings range from Unified Hospital Management System, Laboratory Automation System, Remote Diagnosis, Lab Equipments Interface Engines, Picture Archival & Communication System, Patient Flow Management & Asset Tracking solutions.

To ensure end to end automation, our healthcare products are completely integrated to make it a paperless & filmless healthcare enterprise, adhering to HIPAA & HL7 healthcare standards including compliance to all codification standards (Drugs & Diseases).

### Kurera - Convergence of Healthcare & Business

Kurera is a Unified Healthcare Management solution that unifies the business solutions with Healthcare Decision Systems to provide a better client (patient) experience. Engineered on open systems platform, Kurera has been developed in consortium with one of the largest JCI accredited, healthcare services provider, across South East Asia.

With more than 28 modules, “Kurera” is a smart solution with capabilities like retrieving & disseminating patient specific data across the enterprise. The modules are broadly classified into Front Office, Clinical, Back Office & Core Modules.

Clinicians / Doctors are facing challenges in adoption of ICT solutions as they are hard pressed for time, as a clinical focused application Kurera revolves around addressing these challenges wherein core clinical modules supports clinician with single window interaction with comprehensive features like CPOE, Drug Favorite, clinical charts, form designer, report designer etc.

Our clinical modules have been successfully deployed across 50 plus hospitals with 100% usage ratio by more than 2500 clinicians. With quick turnaround time on each interaction, Kurera has been meeting doctors expectations with its high performance delivered during consultation cycles, thus making it an efficient assisting tool.

### Technology

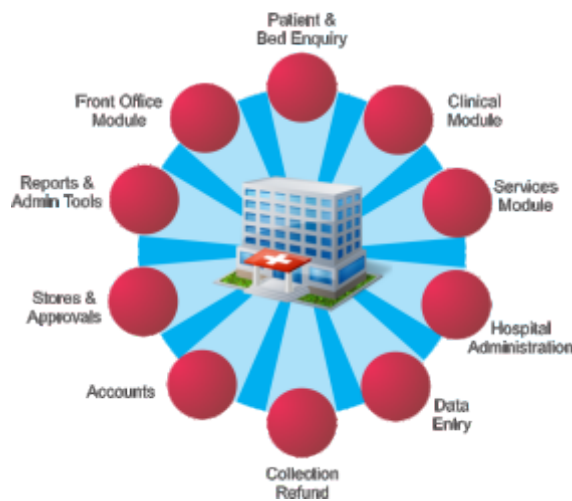

Developed for a very user friendly environment, Kurera is built on advanced .Net Framework as front end technology coupled by SQL as backend support. The User Interface is designed & programmed to ensure friendly interactions / experience, with minimal training to end users.
